Objectives & methodology

Objectives
In October 2022, a survey was conducted by Morning Consult on behalf of the PAN Foundation to explore the current financial burden of out-of-pocket (OOP) prescription medication costs for adults on Medicare, gauge awareness of charitable foundations providing financial assistance for out-of-pocket prescription medication costs, and measure the impact of the recently expanded Extra Help Program and Medicare Part D Coverage.

Methodology
This poll was conducted between October 4-10, 2022 among a sample of 2,040 adults on Medicare. The interviews were conducted online and the data weighted by age, race, ethnicity, and education. Results from the full survey have a margin of error of plus or minus 2 percentage points. Throughout the survey analysis, the audience of adults on Medicare is referred to as adults. Additionally, adults whose annual out-of-pocket prescription medication costs exceed $2K are referred to as adults with high annual out-of-pocket costs.
Key findings

**Difficulty paying $2K in out-of-pocket costs for prescription medications**

Of adults spending less than $2K in out-of-pocket costs, three-in-four (74%) say it would be difficult to pay that amount each year. Of that same population, 60% of adults with low-incomes and 67% of Black adults say it would be very difficult for them to pay that amount each year. Additionally, adults whose annual out-of-pocket costs do not exceed $2K say if they had to spend $2K each year for their medications, they would need to cut back on food-related expenses (60%).

**Difficulty paying $2K in out-of-pocket costs for adults with high annual out-of-pocket costs**

Three-in-four (75%) adults with high annual out-of-pocket costs say it is difficult to pay $2K each year for out-of-pocket prescription medication costs, including 40% who say it is very difficult. Among adults with high annual out-of-pocket costs, 57% report they would need to cut back on food-related expenses if faced with out-of-pocket prescription medication costs that exceeded $2K.

**Seasonality of paying out-of-pocket prescription medication costs**

About four-in-ten (42%) adults with high annual out-of-pocket costs say their costs tend to be higher in specific months. Additionally, adults who experience higher out-of-pocket prescription medication costs in specific month(s) of the year are most likely to specify it is during the month of January (41%).

**Financial assistance from charitable foundations**

About a third (34%) of adults with high annual out-of-pocket costs are familiar with financial assistance programs provided by some national charitable foundations. Approximately a fifth (22%) of adults with high annual out-of-pocket costs say that a health care provider or a member of their team has mentioned these financial programs to them. Black adults (52%) and adults with high annual out-of-pocket costs (60%) are especially likely to consider applying for financial assistance from a charitable organization to cover out-of-pocket prescription medication costs.

**Impact of a Medicare Part D cap of $2K**

Approximately six-in-ten adults (58%) say that a $2K limit on annual out-of-pocket spending would have a significant impact on their ability to afford their prescription medications. A $2K annual limit on out-of-pocket spending would have a more significant impact on adults with high annual out-of-pocket costs (76%), compared to adults whose annual out-of-pocket costs do not exceed $2K (58%). Adults with high annual out-of-pocket costs say the Part D cap of $2K will be helpful (74%) to them when it takes effect in 2025, including 43% who say it will be very helpful. When the Part D cap of $2K takes effect in 2025, adults anticipate paying for their prescription medications out of their social security income (53%).
Financial burden of out-of-pocket costs
One-in-ten adults (10%) say that in a typical year, their annual out-of-pocket (OOP) prescription medication costs exceed $2K.

The next few questions will ask about your out-of-pocket prescription medication costs. In a typical year, do your annual out-of-pocket prescription medication costs exceed $2,000?

- Yes: 83%
- No: 10%
- Don't know/No opinion: 7%
Adults with cancer, a chronic condition, or a rare disease (15%) say their annual out-of-pocket prescription medication costs exceed $2K.

The next few questions will ask about your out-of-pocket prescription medication costs. In a typical year, do your annual out-of-pocket prescription medication costs exceed $2,000?

Impact of future policies
Nearly half (46%) of adults have seen, read, or heard about a monthly cap on the out-of-pocket (OOP) costs for insulin.

The federal government recently passed a series of provisions related to out-of-pocket cost coverage for people on Medicare. Based on your knowledge, please indicate how much you have seen, read, or heard about each of the following provisions.

- A monthly cap on the out-of-pocket costs for insulin: 46%
- The removal of co-pays or cost-sharing for vaccines: 29%
- The $2,000 annual cap or limit on out-of-pocket costs for people on Medicare starting in 2025: 29%
- The ability to pay out-of-pocket costs monthly, with a monthly cap: 23%
- The expansion of the Low-Income Subsidy (or Extra Help) program: 17%
- Eliminating the 5% cost-sharing for medications in the catastrophic phase: 12%
About a quarter (27%) of adults say they have heard of the Extra Help Program before.

As you may know, the Low-Income Subsidy Program (also known as the Extra Help Program), is a federal program operated by the Social Security Administration. This program covers most out-of-pocket costs for Medicare Part D premiums, deductibles, and prescription co-pays for qualifying low-income individuals. Have you heard of the Extra Help Program before?
Adults with low incomes (34%) are more likely than adults with middle incomes (19%) and high incomes (14%) to say they have heard of the Extra Help program before.

As you may know, the Low-Income Subsidy Program (also known as the Extra Help Program), is a federal program operated by the Social Security Administration. This program covers most out-of-pocket costs for Medicare Part D premiums, deductibles, and prescription co-pays for qualifying low-income individuals. Have you heard of the Extra Help Program before?

*More granular income level break out available in appendix
A third (33%) of adults who have heard of the Extra Help Program are currently enrolled in the Program.

Are you currently enrolled in the Extra Help Program?

AMONG ADULTS WHO HAVE HEARD OF THE EXTRA HELP PROGRAM, n= 557

Yes 33%
No 60%
Don't know/No opinion 7%
After reading about the expanded guidelines of the Extra Help Program, based on their current income, a quarter of adults (25%) think they will qualify for the expanded program.

Beginning in 2024, the Extra Help Program will expand to allow a person who makes up to 150 percent of the federal poverty level to apply for maximum assistance. The federal poverty line changes annually, but in 2022, 150 percent of the federal poverty level translates to an annual income of about $20,000 for an individual or $27,000 for a family of two. Based on these new guidelines and your current income, do you think you will qualify for the expanded program?

- Yes: 25%
- No: 57%
- Don't know/No opinion: 17%
Approximately two-in-five adults with low incomes (38%) and Black adults (42%) say based on the new guidelines and their current income, they think they would qualify for the expanded Extra Help Program.

Beginning in 2024, the Extra Help Program will expand to allow a person who makes up to 150 percent of the federal poverty level to apply for maximum assistance. The federal poverty line changes annually, but in 2022, 150 percent of the federal poverty level translates to an annual income of about $20,000 for an individual or $27,000 for a family of two. Based on these new guidelines and your current income, do you think you will qualify for the expanded program?

*More granular income level break out available in appendix
Among adults who think they will qualify for the expanded Extra Help Program, nine-in-ten (90%) would be interested in applying, including 65% who would be very interested.

As a reminder, beginning in 2024, the Extra Help Program will expand to allow a person who makes up to 150 percent of the federal poverty level will be able to apply for maximum assistance. How interested would you be, if at all, in applying to the expanded Extra Help program in 2024?

**Among adults who think they will qualify for the expanded Extra Help Program, n= 518**
As you may know, according to a new law signed in August, there will be a $2,000 annual cap or limit on out-of-pocket costs for people on Medicare starting in 2025. This cap or limit means people on Medicare will no longer pay more than $2,000 each year for their prescription medications. Based on your current prescriptions, when the Part D cap of $2,000 takes effect in 2025, how helpful will the cap be to you, if at all?

Adults are divided on how helpful the $2K annual cap or limit on out-of-pocket costs for people on Medicare will (39%) or will not (42%) be to them when it takes effect in 2025.

- **Very helpful:** 19%
- **Somewhat helpful:** 20%
- **Not too helpful:** 18%
- **Not helpful at all:** 24%
- **Don't know/No opinion:** 19%
Adults with high annual out-of-pocket (OOP) costs say the Part D cap of $2K will be helpful (74%) to them when it takes effect in 2025, including 43% who say it will be very helpful.

As you may know, according to a new law signed in August, there will be a $2,000 annual cap or limit on out-of-pocket costs for people on Medicare starting in 2025. This cap or limit means people on Medicare will no longer pay more than $2,000 each year for their prescription medications. Based on your current prescriptions, when the Part D cap of $2,000 takes effect in 2025, how helpful will the cap be to you, if at all?*
